

CS1000 - Chain or Cord Spring Tensioner Device Fitting Instructions

1. On one side of the tensioner you will find a screw which will come undone with the allen key provided.

2. The Top section of the tensioner will then come apart as per picture below:

3. Please hold one side of the tensioner in place ensuring it's the side without the screw hole and is facing the back plate and then place cord or chain above plastic pulley.

4. Attach the other side of the tensioner and screw the screw back in place.

5. This process can be done before or after the pole or blind has been attached, we recommend that the black plate is turned horizontal, so the screws are hidden behind the tensioner.
